

Standard Finishing Options

With 14 unique finishes to choose from, Britten has the right pick for every project. Don't see what you're looking for? No problem. Special request fabrication options are available by calling a Britten representative at 800.426.9496.

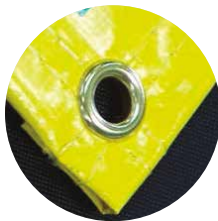

FOLDED WITH DOUBLE-STITCHED HEMS

To strengthen your product and give it a finished look, hems are recommended. The rough outside edge (about 1") is folded and sewn down for a professional finish.

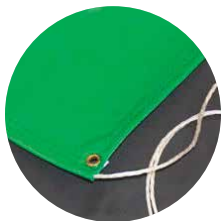

FOLDED, DOUBLE-STITCHED HEMS, BRASS GROMMETS

The rough outside edge (about 1") is folded and sewn down for a professional finish. Metal eyelets are inserted into the corners and hems of your product (1 eyelet per three linear feet). Rope or bungee cord can then be inserted through the eyelets for quick installation. Adds strength and durability, and makes installation easy, too.

SEWN-IN ROPE

Folded and double-sewn hems with brass grommets and sewn-in rope. Durable nylon rope is sewn into the top and bottom hems of your product with 4 foot leads at either end for quick installation.

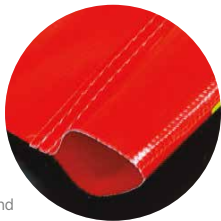

SEWN-IN NYLON WEBBING, D-RINGS

A piece of nylon webbing is sewn into the hem to strengthen the edges of your product. D-rings make installation easy.

POLE POCKETS

A popular fabrication option. To create pole pockets, we sew a 3" open hem along the top and bottom or left and right edges. You can then easily insert a wooden dowel or a piece of pvc pipe through the pocket for quick and easy installation.

HEAVY-DUTY WEBBING, HEMS, GROMMETS

Super heavy-duty 3" webbing with hems and brass grommets. To reinforce products that will hang outdoors for extended periods of time, we recommend reinforced hems. A 3" wide piece of nylon is sewn into the hem to strengthen the edges.

TRIM TO SIZE

No fabrication—just trim to the exact finish size. Most typical with adhesive decal or rigid substrates.

DOUBLE-SIDED TAPE

Double-sided adhesive tape is perfect for indoor applications. Our tape is specially designed to hold your product on a smooth surface without taking off the paint. Not recommended for vinyl banners or outdoor applications.

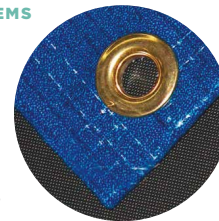

VELCRO

We sew a 1" loop velcro strip into the hem's backside. A 1" adhesive-backed hook velcro strip is supplied to match the loop hemmed side. Not recommended for large outdoor banners.

1" WEBBING WITH HEMS AND GROMMETS

To reinforce products that will hang outdoors for extended periods of time, we recommend reinforced hems. A 1" wide piece of nylon is double-sewn into the hem to strengthen the edges, and brass grommets are spaced typically every 2 or 3 feet.

DOUBLE-ROLLED, DOUBLE-STITCHED

Double-rolling and double-stitching adds strength and durability.

DOUBLE-ROLLED/STITCHED, POLE POCKETS

Double-rolled and double-stitched with pole pockets. To create pole pockets, we sew a 3" open hem along the top and bottom or left and right edges. You can then easily insert a wooden dowel or a piece of pvc pipe through the pocket for quick and easy installation.

DOUBLE-ROLLED/STITCHED, GROMMETS

Double-rolled and double-stitched with brass grommets. Metal grommets are inserted into the corners and hems (1 eyelet per three linear feet). Rope or bungee cord can then be inserted through the eyelets for quick installation. Makes installation easy.

3" POLE POCKETS WITH 6" WRAP

Pole pocket with 6" wrap is most typically used for billboard applications and tensioned to a frame using ratchet straps.
